FarmConnect - Early Termination Fees

Illustrative fixed-term price tables for managed farm connectivity

How the early termination fee is calculated

Contract length	Percentage of remaining contracted monthly charges
12 months	100% for contract months 1-12
24 months	100% for contract months 1-12; 25% for contract months 13-24
36 months	100% for contract months 1-12; 50% for contract months 13-24; 25% for contract months 25-36

Tables use the agreed recurring service charge including GST. One-off connection charges, equipment recovery, travel, unpaid balances and usage-based charges are not included. This formula applies only where agreed in the customer contract; earlier contracts can have different terms. An ETF must reflect UBB's reasonable remaining losses arising from early termination.

FarmConnect is quoted individually. The \$149 wireless-backed and \$199 fibre-backed prices are starting examples, not guaranteed prices for any customer. The actual ETF depends on the monthly amount, contract length and applicable terms in the accepted proposal. Hybrid FarmConnect and managed endpoints require individual quotes.

If a 12- or 36-month FarmConnect contract is specifically agreed

Apply the same 12- or 36-month percentage model above to the contracted monthly price. These lengths are not represented as standard published FarmConnect offers. An individual written ETF schedule should be provided with a custom quote.

Third-party carrier commitments, infrastructure and equipment obligations may apply only as specified in the signed proposal. Do not add undisclosed charges to these tables.

Important: These public illustrations do not replace your accepted service agreement or an itemised cancellation quote. Contact UBB for the remaining contract term and ETF payable at the next invoice date. No ETF applies after the agreed fixed term finishes.
